#### Introduction

The goal of this document is to clarify the functionality of our Online Marketplace system and its features to the reader by showing different diagrams that describe our system in details. It shows distributed database diagrams, the system architecture and how to use it.

"Shams Store" is our product name. It a software system to handle main market services like searching, purchasing, selling and sharing items.

The document includes the user interface and showing how the user can deal with the system. It also includes screenshots for our system and results of testing of our project.

## Target Beneficiaries of the Project

Anyone who has enough responsibility and control over their money can use this system easily. Including buyers and sellers.

## Adopted Programming Language

For the front end: HTML, CSS, Bootstrap

For the back end:

Asp.net core framework, MVC

#### System Architecture

The **Model-View-Controller (MVC)** is an architectural pattern that separates an application into three main logical components: the **model**, the view, and the controller. Each of these components are built to handle specific development aspects of an application. MVC is one of the most frequently used industry-standard web development framework to create scalable and extensible projects.

#### **MVC Components**

Following are the components of MVC

#### Model

The Model component corresponds to all the data-related logic that the user works with. This can represent either the data that is being transferred between the View and Controller components or any other business logic-related data. For example, a Customer object will retrieve the customer information from the database, manipulate it and update it data back to the database or use it to render data.

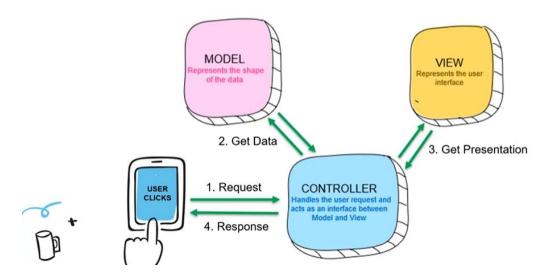

#### View

The View component is used for all the UI logic of the application. For example, the Customer view will include all the UI components such as text boxes, dropdowns, etc. that the final user interacts with.

#### Controller

Controllers act as an interface between Model and View components to process all the business logic and incoming requests, manipulate data using the Model component and interact with the Views to render the final output. For example, the Customer controller will handle all the interactions and inputs from the Customer View and update the database using the Customer Model. The same controller will be used to view the Customer data.

# MVG ARCHITECTURE

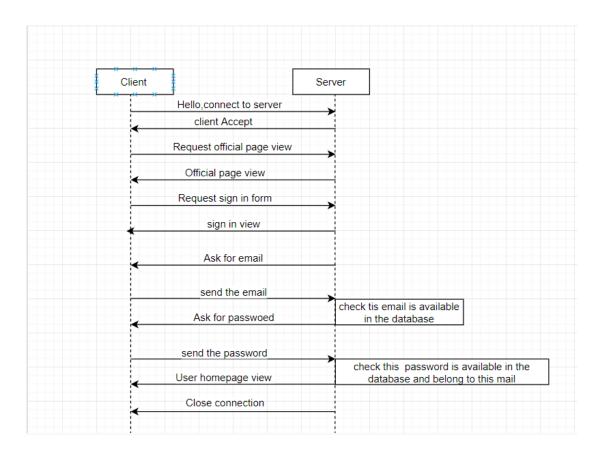

# **Application Level Protocol**

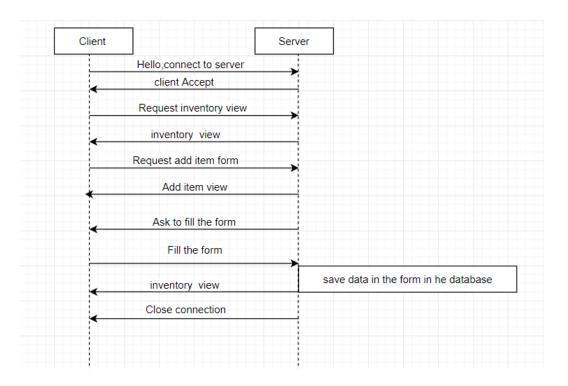

## Link:

https://www.diagrameditor.com/webapp/?ui=atlas&tr=0&gh=0&gl=0&gapi=0&od=0&db=0&lang=en#Lalp.

First scenario: Login

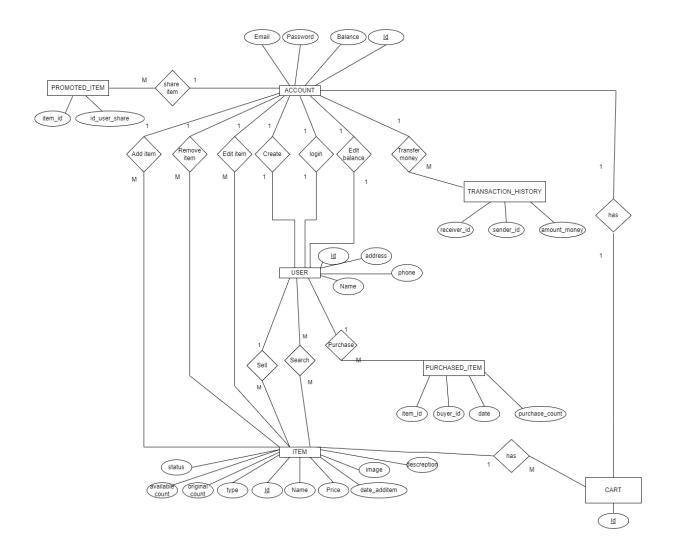

Second scenario: Add item

# Distributed Database Design

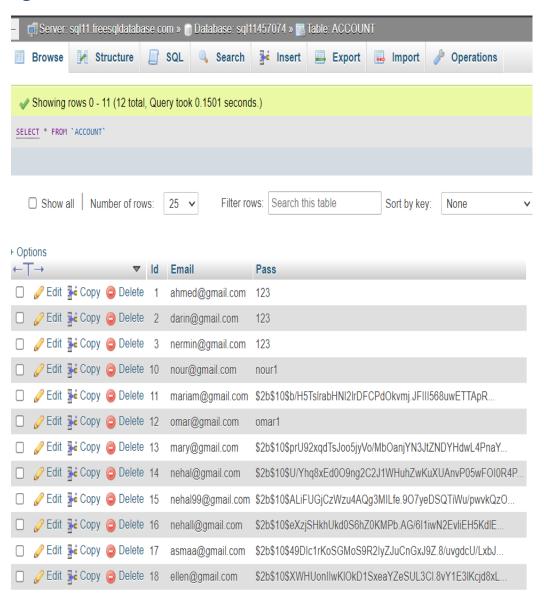

# **Entity Relationship Diagram**

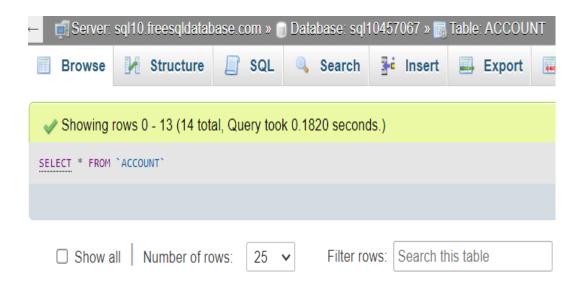

#### **Database Schema**

#### 1- Account schema:

We used vertical fragmentation in the account schema to separate the data related to the balance and the login data as shown in the following figures:

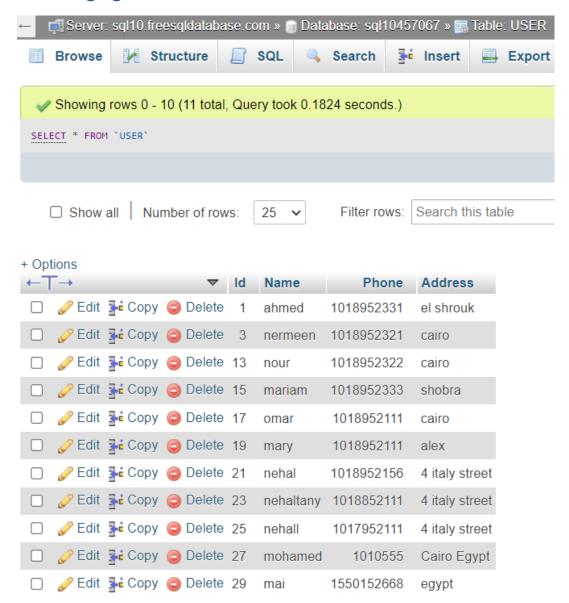

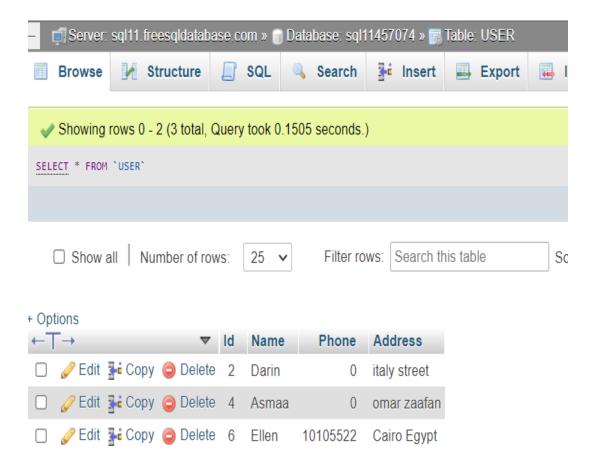

## + Options

←T→				$\triangle$	ld	User_ld	Balance	
	Edit 🛂	Сору	)	Delete	1	1	560	
	Edit 🛂	Сору	)	Delete	2	2	1000	
	Edit 🛂	Сору	)	Delete	3	3	2000	
	Edit 🛂	Сору	)	Delete	10	13	0	
	Edit 🛂	Сору (	)	Delete	11	15	0	
	Edit 🛂	Сору	)	Delete	12	17	0	
	Edit 🛂	Сору	)	Delete	13	19	0	
	Edit 🛂	Сору	)	Delete	14	21	0	
	Edit 🛂	Сору	)	Delete	15	23	0	
	Edit 🛂	Сору	)	Delete	16	25	0	
	Edit 🛂	Сору	)	Delete	17	4	0	
	Edit 🛂	Сору	)	Delete	18	6	0	
	Edit 🛂	Сору	)	Delete	19	27	0	
	Edit 🚁	Сору	)	Delete	20	29	0	

#### 2- User schema:

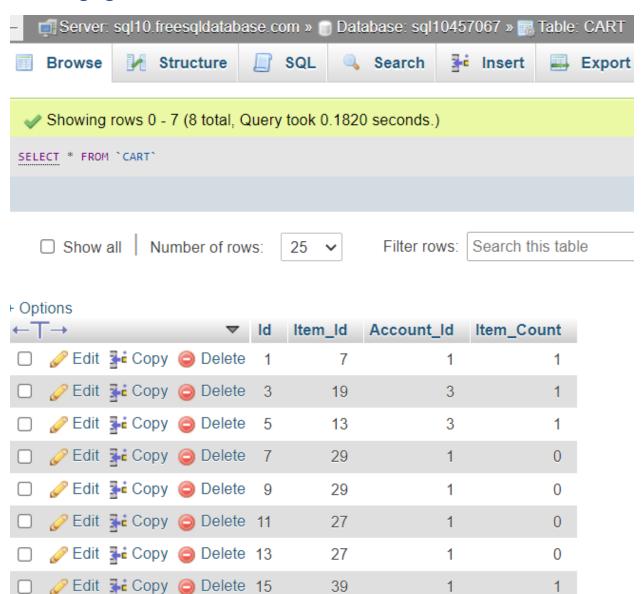

We used horizontal fragmentation in the user schema as shown in the following figures:

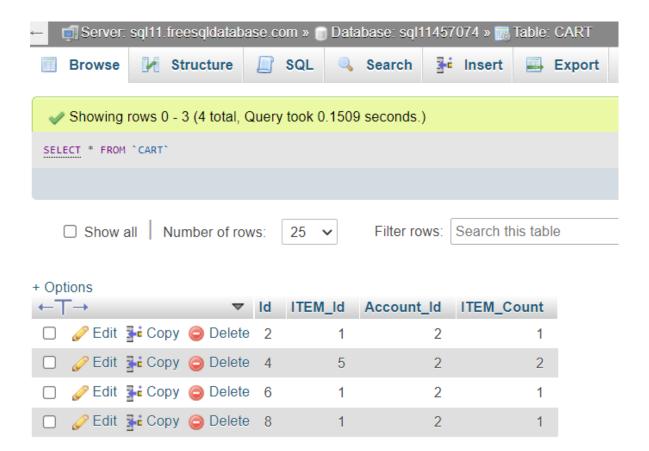

#### 3- Cart schema:

We used horizontal fragmentation in the cart schema as shown in the following figures:

# Time Plane

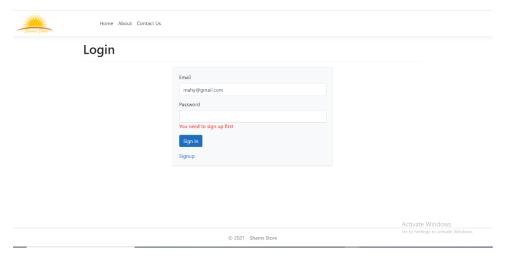

Task	From	То
Searching phase	30/10/2021	5/11/2021
Designing the ER diagram	6/11/2021	10/11/2021
Designing the database	11/11/2021	13/11/2021
Designing the website	14/112021	17/112021
Midterm break	18/11/2021	27/11/2021
Learning phase (to deal with distributed database)	28/11/2021	30/11/2021
Learning phase (ASP.NET)	28/11/2021	30/11/2021
Making online servers and making distributed database tables	1/12/2021	3/12/2021
Making the front end for all the pages in our website	1/12/2021	3/12/2021
Making the functions that can deal with the distributed database	1/12/2021	7/12/2021
Working on our backend of the website	5/12/2021	9/12/2021
Making report and taking screenshots	8/12/2021	10/12/2021

# Testing

1-First the official page will open to the user

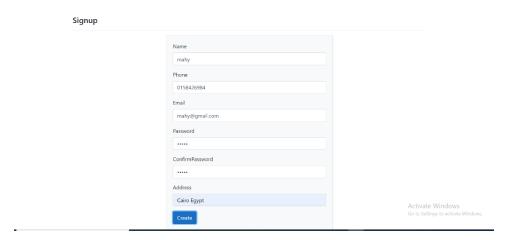

2-The user will click on login button

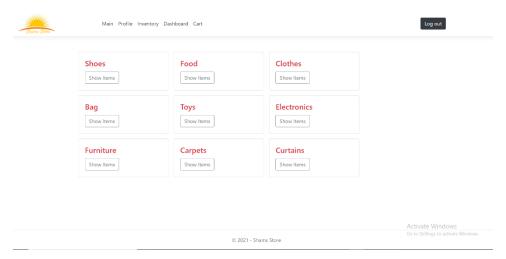

An error will occurs due to that this user did not sign up first

2-The user will click on sign in

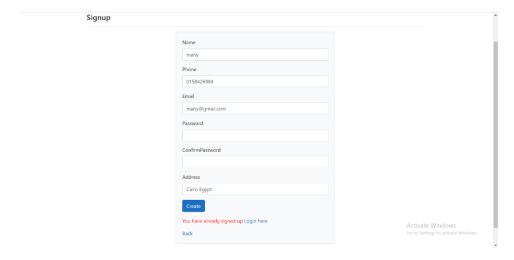

#### 3-After signup the main page will open

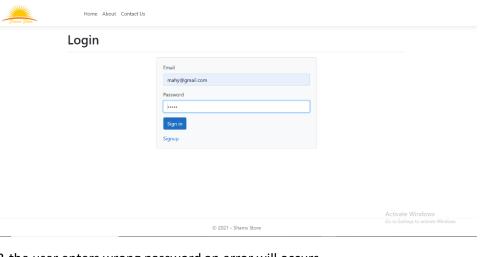

If the user is already sign up and try to sign up again

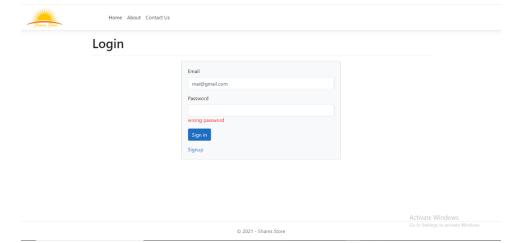

#### 1-An error will occurs and the user will click on login

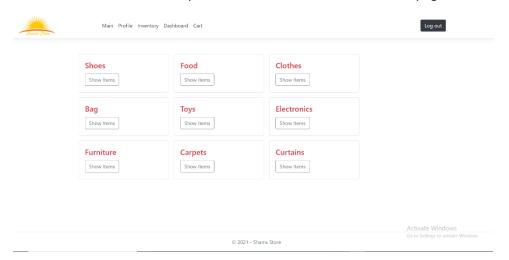

2-the user enters his email and password to login

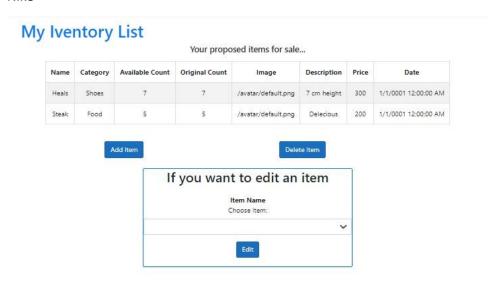

#### 3-the user enters wrong password an error will occurs

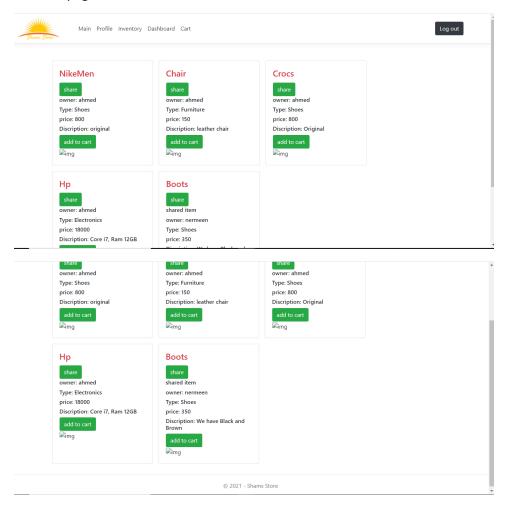

#### 4-the user enters the correct password will be directed to the main page

The Inventory list after the user edited the price of item "heals" and deleted the first item which was Nike

#### 1.owner page

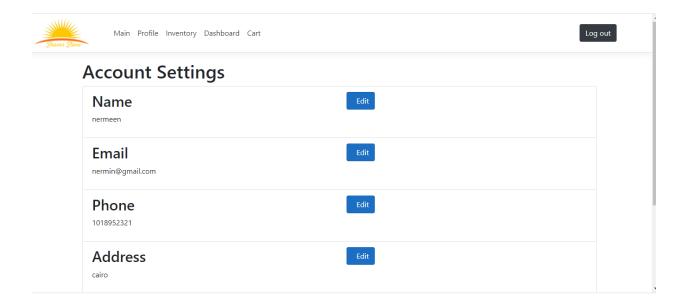

#### 2.Deposit page

#### Heba

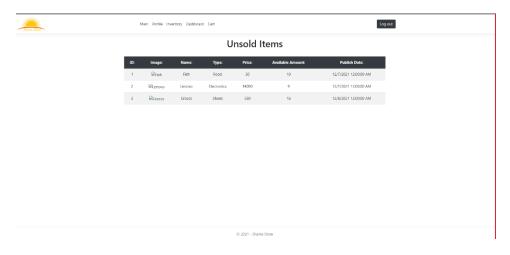

When clicking Dashboard in the nav bar this is the view to the user from which he can go to sold items page, unsold items page, and purchased items page

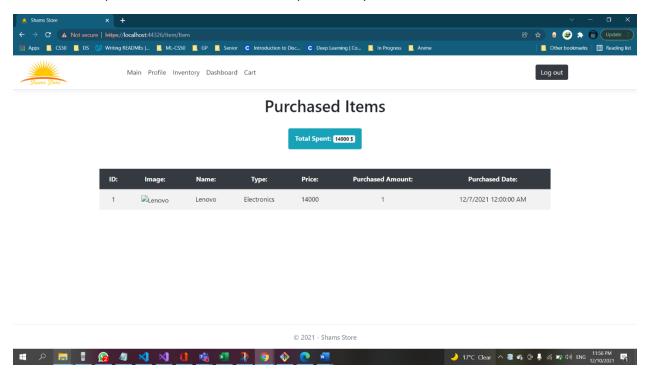

Show the sold items that he has sold using the website and total benefit

Show unsold items of the items that the user has added to the website

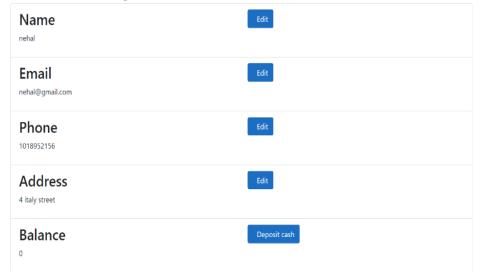

User shows his purchased items with the total spent money

Main Profile Inventory Dashboard Cart

## End User Guide

## 1-Homepage

## 2-Click on signup to signup

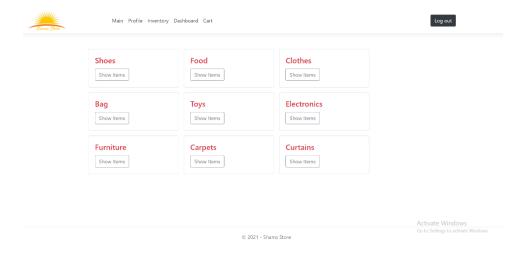

- 3-fill this form then click create
- 4- To login clock login

Insert your email and password then click sign in

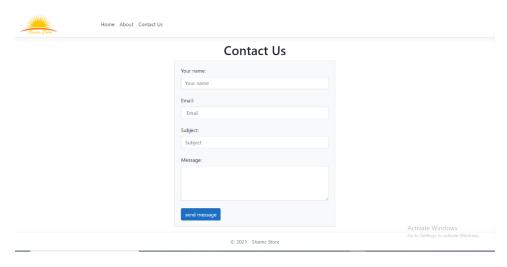

5-in both cases the main page will open

6-if you want to contact us click on contact us in the navigation bar from this page

#### 7-fill this form

8- if you want to know about us click on about us in the navigation bar from this page

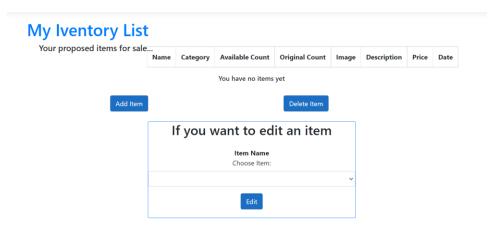

#### About us

We are an online marketplace existing since 2012. Either you want to buy or sell your products, your experience with us will be better. Our goal is to your energy. Just click and let us do the rest.

Activate Windows

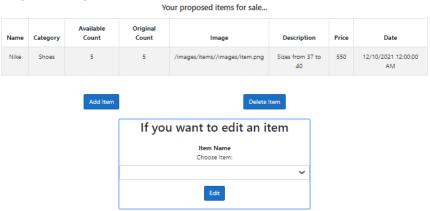

© 2021 - Shams Store

1- Inventory list of a user after he adds 1 item

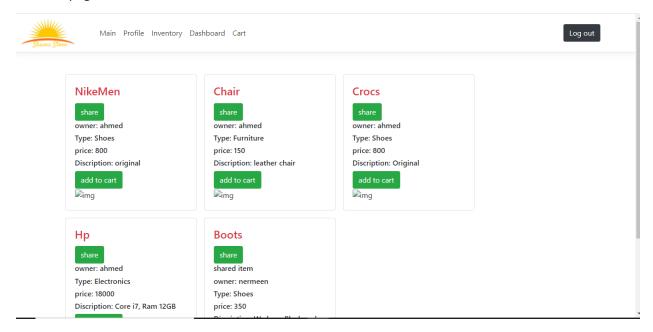

2- When the user clicks on Add Item button in Inventory he gets this form to fill

## My Iventory List

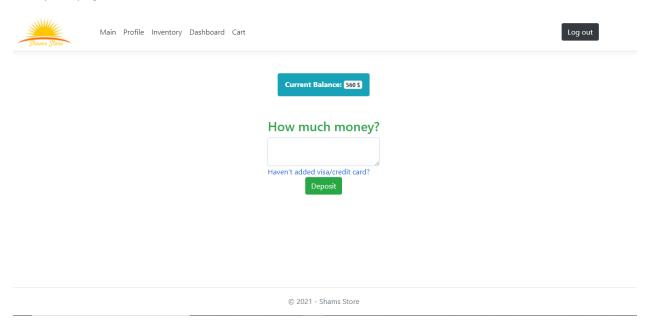

3- When the user clicks on Add Item button in Inventory he gets this form to fill

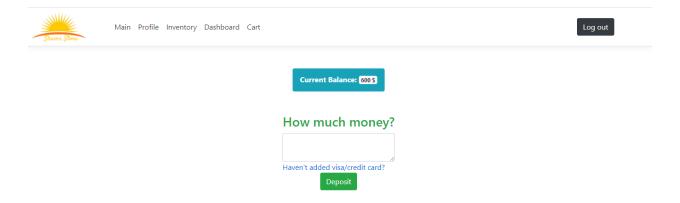

#### 1.owner page

- In this page we show item for specific owner, which user click on his items.
- So, it you want to share his item in your store you can click on share button.
- So, it you want to add his item in your cart you can click on share add to cart.\

#### 2. Deposit page
